95 percent of security breaches are a result of known vulnerabilities and misconfigurations

– 2006 FBI Crime Study

87 percent of the organizations acknowledged they had suffered some kind of security attack during this year. One of five admitted that they had been victimized by 20 or more attacks.

– 2005 FBI Computer Crime Study

Founded:	2003
Market Focus:	Network Security & Vulnerability Management for Infrastructure Devices
Corporate Overview:	Refense is a leading provider of Vulnerability & Compliance management solutions for mission critical network infrastructure. The company develops solutions that address security concerns with network Devices, the very fabric of an IT infrastructure. Refense VMS is the only commercial product that detects Vulnerabilities internal to the network device such as routers, switches and wireless access points. With Refense VMS, organizations can ensure the security and Policy compliance of their wireless and wired networks.
Vision	Refense was created from the merger of 2 words, Offense, Defense and the prefix Re. Offense and Defense are both important aspects of security and the prefix re implies a cyclical nature. The name Refense highlights the importance of security as a constant, never ending cycle. Our vision is to provide proactive solutions to support IT security as a lifecycle and as an integrated function
